

Candles

CARE

HOW TO BEST CARE FOR CANDLES

To light, tilt candle slightly and let flame go across the length of the wick

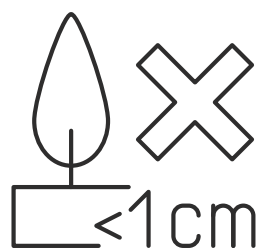

On first use, burn for 1h per diameter inch (approximately 2.5cm) or until wax melts evenly to edges, to avoid 'tunnelling'

Avoid burning continuously for more than 4 hours to avoid large flame; if not evenly melted extinguish, trim wick and reignite to allow melting to edges

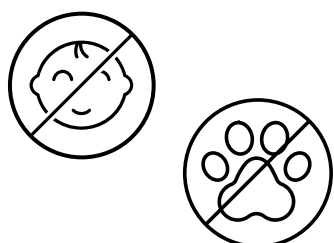

Use snuffer or wick dipper to extinguish

Trim wick to 5mm - 10mm before each use and keep wax clean from any charred wood and/ or debris

Never leave burning candle unattended; be sure to place away from any flammable objects

Keep out of reach of children and pets
